Peninsula Clean Energy  
[nwogberg@peninsulacleanenergy.com](mailto:nwogberg@peninsulacleanenergy.com)Hi,  
I have a request to all your Members and Board Members,

every home need electricity, without electricity life is .....

my suggestion to all members,  
please use maximum areas over by solar panels at home, for your your personal use and sellout to government electricity company to.

that's a one time investment but you will develop Nation industry's and saved electricity manufacturing raw material import too.

think for it.  
( at my home country I use our mansion's rooftop 55X45 feet with solar panels, it's give us power and money (sell to government electric company.) using 'Chinese' solar panels and others associated products.  
i use them from last 8 year's.  
save electricity for industry,  
provide them for cheapest cost.  
it's buildup Nation.My home country currency value is diluted by 75 time.  
It means \$1.00 gives us 75.00 currency.  
you have original dollar,  
means you get 75 times cheaper cost than us.

Built US in every drops of Life.
