

Where does your electricity come from?

Electricity powers your daily life.

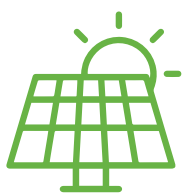

Electricity is delivered to you through wires.

Where does electricity come from?

RENEWABLE ENERGY

Sunshine
warms solar
panels.

Wind turns
blades on wind
mills.

Water flows
through turbines
in dams.

*Peninsula Clean Energy provides
our customers with clean energy
from mainly these sources.*

FOSSIL FUEL ENERGY

Fossil fuels (gas, coal, and oil) are formed from plants and animals that died a long time ago. Some power plants burn them to make electricity.

IMPACT

- 1 Help the environment by reducing greenhouse gases.
- 2 Clean up the air and make people healthier.
- 3 Protect our future from the impacts of climate change.

IMPACT

- 1 Release greenhouse gases that cause climate change.
- 2 Release unsafe pollution and dust into the environment that make people sick.
- 3 Will cause certain plants and animals to die, because of climate change.
